

Before you request a water treatment quote

Tick what you have. Note what you don't — that's where we start.

Excel Water Ltd | 0113 232 0005 | sales@excelwater.co.uk

You do not need every answer before speaking to us — part of our role is to help identify what information is needed. But the more of this you can gather in advance, the quicker and more accurate the recommendation will be. Work through it with your maintenance and production teams.

THE WATER

What the water will be used for *process, rinsing, boiler feed, product contact...*

Required water quality or specification *conductivity, hardness, TDS, pH, ion limits*

Current water source *mains, borehole, surface, recycled process water*

Recent water analysis, if available *the single most useful document you can send*

Any known water quality issues *scaling, iron, bacteria, taste, seasonal variation*

THE DEMAND

Daily usage *litres per day*

Peak flow rate *litres per hour — not the same as daily usage*

Operating hours and shift pattern *continuous, single shift, batch*

Whether demand is steady or batch-based *affects storage and system size*

Consequences of the system going offline *this determines the resilience required*

THE SITE

- Site location** *and any access restrictions*
- Available space and access route** *footprint, ceiling height, doorways, forklift access*
- Drainage route and any discharge limits** *sewer, trade effluent, consented limits*
- Existing equipment, tankage and controls** *what can be retained or re-used*
- Power supply and pressure available** *voltage, phase, incoming bar pressure*

And one question that shapes everything

What is the priority for this project? Most systems can be optimised for one or two of these. Being clear about which matters most tells us more than almost anything else on this list.

- Cost**
- Quality**
- Resilience**
- Compliance**
- Sustainability**
- Capacity**

NOTES

Ready to talk it through?

Send us what you have. We'll tell you what else we need — and why.
